# THE FIRST CAGE FOR THE DJI OSMO POCKET GIMBAL

**EXO Pocket Cage** is the first professional cage system for the **DJI Osmo Pocket gimbal**.

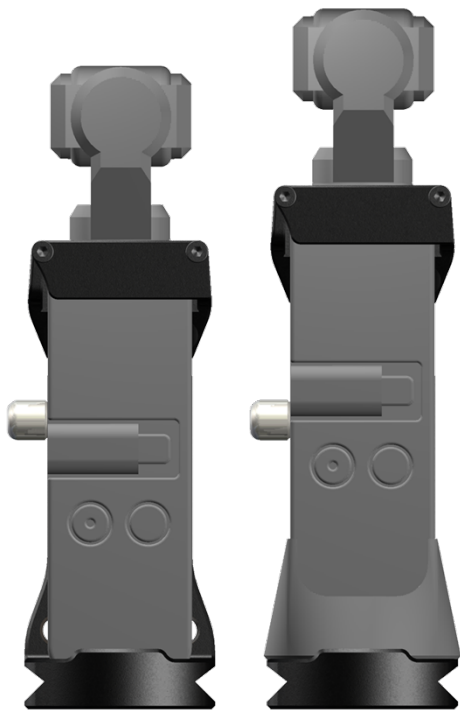

**EXO** adds a host of professional standard features to extend the Osmo Pocket usability: an Arca-Swiss type base for quick release mount/un-mount, a number of 1/4-20 and 3/8-16 threaded holes at the back and bottom of the cage and an ARRI 2-pin mount to rig it easily.

**EXO Pocket Cage** is fully compatible with Osmo Pocket accessories. EXO can be adjusted to use the Pocket wireless base for remote control; EXO is designed to be used with the Pocket original Control Grip extension; EXO gives full access to the Pocket USB-C bottom and back-side ports; EXO allows for smartphones up to a Samsung Galaxy Note 9 to be connected to the Pocket via the original phone adapter.

**EXO ergonomics** are studied to have a better hold of the Pocket while protecting its body.

**EXO Pocket Cage is a system.** This is our first step into building a complete system around the successful DJI Osmo Pocket gimbal. With EXO at the center, we will introduce accessories that will revolutionize the way you use your Pocket, either to capture your precious memories or for demanding production environments.
